(54) **LINKAGE PROCESSING CONTROL SYSTEM**

(57) Abstract:

PURPOSE: To easily select/change an object which equally handles an external and internal events by another and its own applications, respectively, and processes an event by providing a connection object in a linkage processing control system.

CONSTITUTION: The system is provided with the object (connection) 11 setting an event detection processing detecting the event, a link table 12 setting linkage to the object of a transmission destination and a processing ID corresponding to the event ID and an object 13 setting a processing corresponding to the processing ID. The processing ID of the event coinciding with the link table 12 is fetched and transmitted to the object 13 of the linkage destination by the event detection processing of the object (connection) 11 receiving the events from outside/inside. Then, the object 13 receiving the processing ID processes in accordance with the processing ID.
